

# Sheriffs Sale FOR Taxes

On Monday, January 22nd, 1917, at one o'clock, in front of the Court House in Lancaster, Ky., I will offer to the highest bidder for cash, so much of the following described property, as will pay the State, County and district school taxes for the year 1916.

The purchaser is entitled to deed in two years and interest at the rate of 30 per cent per annum and 15 per cent damages if redeemed in that time. These are the uncollected taxes and must be paid by January 22nd, or the property will be sold.

## HUNTERS TAKE NOTICE.

This Agreement Witnesseth: That in order to protect the game on our lands for a period of three years we bind ourselves not to hunt thereon, nor permit anybody else to do so, and we further agree to prosecute with diligence all persons who violate the game laws of Kentucky or trespass upon our lands for the purpose of hunting. And we further agree to act as Deputy Game Wardens for the purpose of carrying out this agreement. Except each of us have the right to kill rabbits on our farms or permit it to be done by another under our supervision, or the supervision of some responsible and reliable person selected by us.

This November 15th, 1915.

# Scientific Farming

## ALFALFA SEED BEDS.

How to Prepare Them and How to Inoculate the Plant.  
[Prepared by United States department of agriculture.]

The following suggestions for preparing the seed bed and inoculating seed to secure a stand of alfalfa in the molder regions of the eastern United States east of the ninety-fifth meridian were prepared by H. L. Westover, scientific assistant, bureau of plant industry, and H. B. Hendrick, states' relations service, United States department of agriculture.

The tender nature of the young alfalfa plants requires that the soil be in excellent tilth at the time of planting. Many of the failures to secure a good stand may be traced directly to the improper condition of the seed bed.

## UNINOCULATED AND INOCULATED PLANT.

The aim should be to get the soil finely pulverized, thoroughly compacted and comparatively free from weeds. The surface two or three inches should be fine and loose, and below this it should be sufficiently firm to favor the capillary movement of water, yet porous enough to permit good drainage and free circulation of air through the soil. Fall plowing is desirable in sections where early summer seeding is practiced. If fall plowed the land should be thoroughly disked as soon as it will work up well in the spring and should then be harrowed until seeding time at intervals sufficiently frequent to keep down the weeds and to make a perfect seed bed. Where land is plowed in the spring for alfalfa at least four to six weeks should intervene between the time of plowing and seeding, during which time the land should be harrowed every ten or twelve days to keep down the weeds and to conserve the moisture. Where the soil is inclined to be too loose or when there are any clods the roller pulverizer is an excellent tool to use. When alfalfa is to follow winter wheat or other small grain crops a thorough disking, followed by frequent harrowings, will often be all that may be required, provided the land is worked shortly after the grain is removed. When plowing in this case is necessary the preparation of the seed bed will often be facilitated by disking ahead of the plow and by following the plow at once with a pulverizer and harrow. On land that has been in an early maturing cultivated crop, such as potatoes, peas, sweet corn or soy beans, no other preparation will be needed than the necessary harrowings.

Nitrogen fixing bacteria should be provided, unless the soil is known to be supplied naturally with these germs. Inoculation may best be accomplished by scattering over the area to be seeded surface soil taken to the depth of four or five inches from another field upon which the crop has been previously successfully grown. The soil should be broadcasted, at the rate of from 250 to 500 pounds per acre, and harrowed in immediately. The spreading should take place on a cloudy day or late in the afternoon, as the sun's rays are destructive to the germs. Soil from the roots of sweet clover plants also will inoculate alfalfa. Care should be taken to avoid introducing noxious weeds or fungous diseases. The practice of sowing a small quantity of alfalfa with the regular seeding of clover or other hay crops each year for a few years before it is intended to devote the land to alfalfa has in some cases apparently introduced sufficient bacteria for inoculating the succeeding crop of alfalfa. Another method which may be used is that of inoculating seed with an artificial culture, a limited quantity of which can be procured from the United States department of agriculture, free of charge. Full instructions for use accompany each bottle of culture. This culture is produced also for distribution by the laboratories of several of the state agricultural experiment stations. The combined use of the soil and the artificial culture gives added assurance of successful inoculation and is recommended when both can be readily obtained.

The amount of seed that is required varies with the perfection of the seed bed, the character of the soil, the grade of seed used, and the kind of weather at the time of seeding. In general, from twenty to thirty pounds per acre should be used, depending upon the conditions given above.

# Maxwell

## A low priced car you want to keep!

It is very seldom you find an owner of a low priced car—other than Maxwell owners—who is not planning to buy a more expensive automobile.

This is because inexpensive cars as a rule are not complete—are not comfortable—are not satisfying in appearance.

But the Maxwell answers every requirement you make of your car. With electric starter and lights, one man top, speedometer, gasoline gauge, dash lamp, instrument board, etc.—it is complete and unusually convenient.

The handsome design compares very favorably with

other cars selling for several times the Maxwell price. The big roomy seats insure the utmost comfort for the allotted number of passengers.

In these features which are predominant in higher priced cars the Maxwell offers everything you desire. Besides you have the wonderful economy in first cost and operation.

The car you want at a price which eliminates any thought of extravagance or sacrifice. That's why you will want to KEEP THE MAXWELL.

Let us show you what the Car will do.
